

Software Application to Fully Automate Perishable Cargo Terminal.

Business Challenge

Fourth largest international airport in India requires a Software Application to Fully Automate Perishable Cargo Terminal. Need the application with to be integrated with all the automation hardware and also work in synchronization with the EDI of Indian customs.

Z-Beanz's Solution

Zesty Beanz is offering a custom OpenERP work flow based documentation system to handle the processes at the Perishable Cargo department. This application handles the requirements of the CIAL website and the client-server application that would handle the work flow as existing at present and with EDI Scenario as well, warehouse management and other requirements of the Perishable Cargo Complex. The system will also provide various management information reports giving a summary of the cargo handling operation seamlessly.

Both GTK and web interface is being implanted. The Airline, shipping agents are also given access to the system to make an efficient Cargo handling system.
