

Implement OpenERP for Finance, Inventory, Purchase, Sales, Production departments

Business Challenge

A Trading company based in Spain requires to Implement OpenERP for Finance, Inventory, Purchase, Sales, and Production departments. There were multiple ware houses in different geographical locations. Sales happen considering stock in all the locations.

Handling the customized sales and purchase process for products with BoM.

Z-Beanz's Solution

Zesty Beanz offered solution in OpenERP primarily to handle multiple stock location as per customer layout policy. Packing list reports were modified to take care of the BoM of the product under it. Customization of sales and purchase work flow that contain products with BoM. Custom filtering functionalities were also implemented to enable users in different location to work seamlessly. Financial account management module was also implemented to make a complete solution.

Benefits

- OpenERP with customised Inventory management.
- Implementation of OpenERP BoM independent of MRP module.
- Customisation of sales and purchase work flow and reports.
